

## PRODUCT OVERVIEW

Managed guest internet and captive portal access for Alaska businesses.

### What AK Aurora Access Does

AK Aurora Access sits between your existing internet connection and your guests. Instead of handing out one shared Wi-Fi password, you can provide a controlled, branded guest-access experience that better fits the way your property operates.

### Guest Access Options

#### Complimentary Access

Provide open/included guest access through the captive portal.

#### Voucher or PIN

Issue codes to guests through staff or the front desk.

#### Room / Reservation Included

Use guest internet as part of an existing stay or service.

#### Paid / Metered Access

Support a revenue-producing access model where appropriate.

### Designed Around Real Properties

- RV parks and campgrounds
- Lodges, cabins, and remote hospitality properties
- Small hotels and motels
- Tour and excursion operations
- Seasonal Alaska businesses
- Properties using compatible Starlink, cellular, cable, fiber, or other upstream connections

### What the Property Gets

#### Branded Portal

Present a more professional guest experience.

#### Access Controls

Choose how guests receive access.

#### Deployment Visibility

See useful status and usage information.

#### Flexible Operations

Support front-desk, complimentary, voucher, and other workflows.

#### Customer Management

Keep deployment information in one place.

#### Local Focus

Designed around Alaska hospitality and seasonal operations.

# A Simple Guest Journey

## Connect

Guest selects the property Wi-Fi network.

## Welcome

The branded captive portal opens.

## Access

Guest enters a code, accepts included access, or completes the available access method.

## Online

The guest receives internet access based on the configured rules.

## Deployment Philosophy

AK Aurora Access is designed to work as a guest-access layer rather than replacing the property's underlying internet service. Exact deployment depends on the connection, router/gateway, property layout, and service plan. Supported configurations are validated before installation.

## What We Emphasize

- Simple guest instructions
- A professional property-branded experience
- Practical management for owners and staff
- Flexible access methods
- Lightweight captive-portal performance
- Clear separation between the property's internet service and AK Aurora guest-access management

## What We Do Not Promise

- AK Aurora Access does not automatically increase the speed or capacity of the property's upstream internet connection.
- Coverage still depends on the property's Wi-Fi design, placement, interference, and hardware.
- Features are offered only when implemented and supported for the specific deployment.

## Next Step

Tell us about your property, your current internet connection, the approximate number of guests/devices you serve, and how you want guests to receive access. We can then determine whether AK Aurora Access is a good fit and recommend a practical deployment approach.
